

Project Update...

Hospital refurbishment in London

Highline are currently on site with a major healthcare company to refurbish the entirety of one of their hospital floors! To ensure the smooth installation of the MEPH services and maintain an accurate programme, we have created a 3D coordinated design, allowing the clear visuals of the works within each room throughout the floor! Click the images below to watch the walkaround.

ISO Accreditation Celebration...

Congratulations to the team for the renewals of our 2023 ISO 14001, ISO 9001 and ISO 45001 accreditations!

Natasha, our SHEQ Manager and Katie, our Accounts and Office Manager have been working extremely hard within the last few weeks gathering the evidence for the annual audit. It is important for us as a business to maintain these certificates as it means we can clearly demonstrate to our staff and clients our commitment to ensuring we are compliant, make a positive contribution and work together to achieve the following:

Reducing our environmental impact and focusing on environmental risks within each project through our EMS.

Ensuring our health and safety training is to a high standard and the well-being of our staff is always monitored. We do this by monitoring and maintaining training records, ensuring RAMs are up to date, making sure the correct materials and PPE are available and safety briefings are provided to our staff and site operatives.

Ensuring we make a lasting impression and always endeavour to exceed client expectations, improve customer satisfaction and ensure that the quality of work which we produce is never compromised.

Project Completion...

WC installation by our specialised works team, on behalf of a pharmaceutical client

The overall works included the demolition and installation of three new WCs. New cubicle systems, worktops, timber doors and a brand new DOC M disabled pac were installed. Finally, decoration works and new suspended ceilings were fitted to finish off. We received great feedback from our client and site staff, well done team!
