Project Completion...

Highline have recently handed over a brand new outpatients facility for our healthcare client based in Nine Elms & Battersea! Our team converted the old 2-story marketing suite and 2 separate apartment show rooms into a medical facility that can be utilised by patients for same day consultations. Initially, it was stripped back to shell and core to allow us to complete a full Design and Build scheme for the new space. Here's a list below of the areas that we created and installed:

- 5 x consultation rooms
- 1 x Phlebotomy area
- Full treatment rooms
- 2 x DU & CU areas
- Staff changing facilities
- Staff rest room
- Comms room
- Office spaces
- Passenger lift and surrounding area
- Plant room to house the new services, AHU's, the chiller, dirty extract system and air conditioning

Well done to the entire team and we hope our clients enjoy their new facility!

Company Update...

This month saw our latest team meeting held by our Director Brad Pammen. These meetings take place intermittently throughout the year and are invaluable for internal communication. Where we are all busy working on different projects, team meetings are a great opportunity for us to come together. They allow scope for discussion, clarity on the progress of the business and a platform to voice any ideas or concerns. It was great to have the team together under one roof!

Health Surveillance...

At the beginning of the month our SHEQ Manager Natasha Griggs organised our annual Health Surveillance for the staff within Highline. An external occupational health specialist attended the premises in a mobile unit as given the nature of the work we do, it is crucial that we provide our staff with annual assessments to detect any health problems early on which may have derived from work-related activity. This also allows measures to be put in place to prevent any problems worsening.
