Specialised Works Project Completion...

Our Specialised Works team have recently completed multiple office upgrades for our transportation client based in Croydon. Our team began with the internal demolition of the building. The offices and storeroom were then refurbished to renew all the existing joinery, flooring and architectural finishes to suit the clients branding and design before upgrading the electrical and data points within the facility to comply with the new area. Upon completion, the offices were fully furnished and all electrical certifications provided to the client, on time and within their budget.

Wellbeing at Highline...

Tuesday 10th October marked this years World Mental Health Day. At Highline, we prioritise and actively promote a healthy wellbeing workspace, ensuring to raise awareness of the causes, effects and solutions to stress. Internally, we've recently renovated our office garden space to maintain a tranquil area that can be used for both working and rest space when the weather permits, whilst externally, we suggest online webinars that may be beneficial to our employees in raising awareness to mental health. In 2024, we pledge to continue finding new and innovative ideas to improve our business's part in ensuring a positive environment is provided for all our team.

Environmental Focus...

This month our Office Manager Katie Williams and SHEQ Manager Natasha Griggs, undertook a two-day training course in Carbon Literacy through the environmental consultancy, Positive Planet. Highline are already Carbon Neutral certified, and this course helped provide further insight into the impact of our carbon footprint caused by everyday activities, and the ways in which we as a business can reduce our emissions and thus make a significant difference to our environment. As a business, we aim make a positive contribution to the planet however we can and this includes the day-to-day practices and items used at our HQ such as provision of reusable keep cups, refillable cleaning products from our local zero waste shop, reducing deliveries etc. These are just a few of the sustainable practices we have adopted. We pledge to do more towards achieving a low carbon and sustainable future.
